DETAILED ACTION

Drawings

Figures 1-4 and 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee (1,881,723). Lee discloses an impeller suitable for use in a centrifugal pump, for handling liquid mixtures containing particulate solids including back and front shrouds 7 and 8 having opposed faces, an outer peripheral edge portion and a rotation axis, a plurality of pumping vanes 6 between the shrouds and extending away from the rotation axis each pumping vane having an outer peripheral edge portion, and a plurality of auxiliary vanes 9 and 10 on the other face of the

shrouds, the auxiliary vanes of each having an outer edge portion wherein the dimension Da from the rotation axis to the outer peripheral edge portion of the shroud is greater than the dimension from the rotation axis to outer edge portion of the auxiliary vanes Db and is greater than the dimension Dc from the rotation axis to the outer peripheral edge portion of the pumping vanes. The dimension Da of the front and back shrouds is greater that the dimensions Db and Dc and the dimensions Db and Dc are substantially the same.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee. Le discloses all of the claimed subject matter except for the dimensions Db and Dc being within 5% of each other, Db being less than 0.95Da, the ratio of Db/Da being from 0.65 to 0.95, and the ratio of Db/Da being from 0.65 to 0.9.

Since applicant has not disclosed that having the diameter of the blades and shrouds at those specific dimensions solves any stated problem or is for any particular purpose above the fact that the ratios reduce wear on the auxiliary blades and it appears that the blades of Lee would perform equally well with having the dimensions as claimed by applicant, it would have been an obvious matter of design choice to modify the blades and shroud of Lee by utilizing the specific dimensions as claimed for the purpose of reducing blade wear.

CONCLUSION

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Johnson (1,879,803) discloses a rotary pump impeller having auxiliary blades on the outer surface of the impeller shroud wherein the outer diameter of the auxiliary blades end short of the shroud peripheral edge.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dwayne J. White whose telephone number is (571) 272-4825. The examiner can normally be reached on 7:00 am to 4 pm T-F and alternate Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Look can be reached on (571) 272-4820. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
